Theory
Class Work: 50 Marks
Exam: 100 Marks
Total: 150 Marks
Duration of Exam: 3 Hrs

SECTION-A
Unit-I: Stress transformation and Strain transformation at a point in an elastic body, 3D Problems, Rigid body translation and rotation of an element in space. Generalized Hook law, Separation of Elastic Strains and rigid body displacement for a general displacement field u, v, w. Principal Stress and Strains.
Unit-II: Two Dimensional Problems in Elasticity- Plane Stress and Plane Strain Problems. Differential equations of equilibrium and compatibility equations. Boundary Conditions & Stress Functions. Problems in Rectangular coordinates, Polynomial solutions, Cantilever loaded at the end, simply supported load beam under uniformly distributed load, linear loading.

SECTION-B

SECTION-C
Unit-IV: Energy Theorems-Applications of complimentary energy theorems to the problems of elasticity.

SECTION-D
Unit-V: Introduction to plasticity, Criteria of yielding, strain hardening, rules of plastic flow, different stress strains relations. Total Strain theory, theorems of limit analysis. Elastoplastic bending and torsion of bars.

Theory
Class Work: 50 Marks
Exam: 100 Marks
Total: 150 Marks
Duration of Exam: 3 Hrs

Section- A
Unit – I

Unit – II
INTERPOLATION AND APPROXIMATION AND CURVE FITTING: Lagrange’s and Newton-divided difference formula, Newton interpolation formula for finite differences, Newton’s forward and backward interpolation formulae, Gauss’s forward and backward interpolation formulae, Bessel’s and Laplace-Everett’s formulae, Cubic spline, least squares approximation using Chebyshev polynomial, Cubic splines and Least squares curve fitting.

UNIT – III
Section- B

Unit – IV

SOLUTION OF LINEAR SYSTEM: Direct Methods, Gaussian elimination and pivoting, Matrix inversion, UV factorization, Iterative methods for linear systems.

Unit – V

THE ALGEBRAIC EIGEN VALES PROBLEM: The power method, Jacobi’s method, Given Method and House Holder Method for Eigen value problems, Eigen values of a symmetric Tridiagonal matrix

Unit – VI

SOLUTION OF ORDINARY DIFFERENTIAL EQUATION AND PARTIAL DIFFERENTIAL EQUATION:

Suggested Readings:

## Theory

Class Work: 50 Marks  
Exam: 100 Marks  
Total: 150 Marks  
Duration of Exam: 3 Hrs

### SECTION-A

**Unit-I: Introduction**: Transport and Socioeconomic Activities, Historical Development of Transport, Transportation in the Cities, Freight Transportation, Future Developments.

**Unit-III: Trip Generation Analysis**: Trip Production Analysis; Category Analysis; Trip Attraction Modelling.

### SECTION-B

### SECTION-C

**Unit-VI: Route Assignment**: Description of Transport Network, Route Choice Behaviour, The Minimum Path, Minimum Path Algorithm, Route Assignment Techniques, All-or-Nothing Assignment, Multipath Traffic Assignment, Capacity-Restrained Traffic Assignment.

**Unit-VII: Transportation Survey**: Definition of Study Area Zoning, Types of Movements, Types of Surveys, Home-Interview Survey, Commercial Vehicle Survey, Intermediate Public Transport Survey,

Theory
Class Work: 50 Marks
Exam: 100 Marks
Total: 150 Marks
Duration of Exam: 3 Hrs

SECTION-A
Unit-I: MAINTENANCE AND REPAIR STRATEGIES: Maintenance, repair and rehabilitation, Facets of Maintenance, importance of Maintenance various aspects of Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration.

Unit-II: SERVICEABILITY AND DURABILITY OF CONCRETE: Quality assurance for concrete construction concrete properties- strength, permeability, thermal properties and acking. - Effects due to climate, temperature, chemicals, corrosion – design and construction errors – Effects of cover thickness and cracking.

SECTION-B
Unit-III: MATERIALS FOR REPAIR: Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, ferro cement, Fibre reinforced concrete.
SECTION-C

SECTION-D
Unit-V: REPAIRS, REHABILITATION AND RETROFITTING OF STRUCTURES Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering corrosion, wear, fire, leakage and marine exposure.

Theory
Class Work: 50 Marks
Exam: 100 Marks
Total: 150 Marks
Duration of Exam: 3 Hrs

SECTION-A

Unit-II: Relevance of construction schedules-Bar charts - The critical path method-Calculations for critical path scheduling-Activity float and schedules-Presenting project schedules-Critical path scheduling for Activity-on-node and with leads, Lags and Windows-Calculations for scheduling with leads, lags and windows-Resource oriented scheduling-Scheduling with resource constraints and precedences -Use of Advanced Scheduling Techniques-Scheduling with uncertain durations-Crashing and time/cost trade offs -Improving the Scheduling process – Introduction to application software.

SECTION-B

Unit-III: The cost control problem-The project Budget-Forecasting for Activity cost control - financial accounting systems and cost accounts-Control of project cash flows-Schedule control-Schedule and Budget updates-Relating cost and schedule information.

SECTION-C

SECTION-D

Unit-V : Types of project information-Accuracy and Use of Information-Computerized organization and use of Information -Organizing information in databases-relational model of Data bases-Other conceptual Models of Databases-Centralized database Management systems-Databases and application programs-Information transfer and Flow

Theory
Class Work: 50 Marks
Exam: 100 Marks
Total: 150 Marks
Duration of Exam: 3 Hrs

SECTION-A

SECTION-B
Unit-II Retaining Wall: Structural behaviour of retaining wall, stability of retaining wall against overturning and sliding, Design of T-shaped retaining wall, Concept of Counter fort retaining wall.

SECTION-C
Unit-III Foundation: Design of Raft foundation and Pile foundation including pile cap.

SECTION-D
Unit- IV Water Tank: Design criteria, material specifications and permissible stresses for Water tanks, Design concept of circular and rectangular Water tanks.

Books:
Theory
Class Work: 50 Marks
Exam: 100 Marks
Total: 150 Marks
Duration of Exam: 3 Hrs

SECTION-A
Unit-I: Material characteristics, Mix design concepts, Stresses in flexible pavements, Stresses in rigid pavements, factors affecting pavement design.

SECTION-B
Unit-II: Analysis and Design of Flexible Pavements.

SECTION-C
Unit-III: Analysis and Design of Rigid Pavements.

SECTION-D
Unit-IV: Analysis and Design of Pavement Shoulders and drainage.

Books:
Theory
Class Work: 50 Marks
Exam: 100 Marks
Total: 150 Marks
Duration of Exam: 3 Hrs

SECTION-A
Unit-I Introduction to structural Dynamics: Definition of Basic Problem in Dynamics, Static vs Dynamic loads, Different types of dynamics loads.
Unit-II Single Degree of Freedom (SDOF) Systems: Undamped vibration of SDOF system natural frequency and period of vibration, Damping in structures, viscous damping and Coulomb damping, effect of damping on frequency of vibration and amplitude of vibration, Logarithmic decrement, Forced vibration, response to periodic loading, response to pulsating forces, dynamic load factor, Response of structure subjected to General dynamic load, Duhamel’s Integral, Numerical Evaluation of Dynamic Response of SDOF systems, Response of structure in frequency domain subjected to general periodic and not periodic/impulsive force of short duration, use of complex frequency response function, use of Fourier series for Periodic Forces, Introduction to vibration isolation, Distributed mass system idealized as SDOF system, use of Rayleigh’s method. Response of SDOF system subjected to ground motion.

SECTION-B
Unit-III Lumped mass multidegree of freedom (MDOF) system, coupled and uncoupled system, Direct determination of frequencies of vibration and mod shape, Orthogonality principle, Vibration of MDOF systems with initial conditions, Approximate method of determination of natural frequencies of vibration and mode shapes – Vector Integration Method, Energy methods and use of Lagrange’s method in writing equation of motions, decoupling of equations of motion, modal equation of motion, concept of modal mass and modal stiffness, Forced vibration of MDOF system, Modal Analysis. Application to multi-storey rigid frames subjected to lateral dynamic loads.

SECTION-C
SECTION-D
Unit-V Structure with distributed mass system: use of partial differential equation, Free vibration analysis of single span beams with various boundary conditions, determination of frequencies of vibration and mode shapes Forced vibration of single span beams subjected to the action of specified dynamic loads.
Unit-IV: Design of earthquake resistant structures: Pseudo design.

Books:
2. Physical and General Geology by S.K.Garg
3. Anil K. Chopra, Dynamics of Structures, Prentice Hall of India.

Theory
Class Work: 50 Marks
Exam: 100 Marks
Total: 150 Marks
Duration of Exam: 3 Hrs

SECTION-A
Unit-I Introduction, soil exploration, analysis and interpretation of soil exploration data, estimation of soil parameters for foundation design.
Unit-II Shallow Foundations: Methods for bearing capacity estimation, total and differential settlements of footing and raft, code provisions. Design of individual footings, strip footing, combined footing, rigid and flexible mat, buoyancy raft, basement raft, underpinning.

SECTION-B
Unit-III Pile Foundations: Estimation: load carrying capacity of single and pile group under various loading conditions. Pile load testing (static, dynamic methods and data interpretation), settlement of pile foundation, code provisions, design of single pile and pile groups, and pile caps.

SECTION-C
Unit-IV Well Foundations: Types, components, construction methods, design methods (Terzaghi, IS and IRC approaches), check for stability, base pressure, side pressure and deflection.

SECTION-D
Unit-V Retaining Walls: Types (types of flexible and rigid earth retention systems: counter fort, gravity, diaphragm walls, sheet pile walls, soldier piles and lagging). Support systems for flexible retaining walls (struts, anchoring), construction methods, stability calculations, design of flexible and rigid retaining walls, design of cantilever and anchored sheet pile walls.

Books:
5. Dr. Alamsingh, Geotechnical Engineering, Standard Book House
7. Dr. Koner, Designing with Geosynthetics.

SECTION-A
Unit-I: Geometric design of highways;
Unit-II: Geometric design of at grade intersections.

SECTION-B
Unit-III: geometric design of grade separated intersections.

SECTION-C
Unit-IV: design of bicycle and pedestrian facilities.

SECTION-D
Unit-V: parking layout and design, terminal design, street lighting.

Books:
Guidelines for Seminar

1. Seminar should be based on thrust areas in Structural Engineering including materials and allied subjects involving the knowledge of Structural Engineering (e.g. Geotechnical Engineering, Transportation Engineering, Hydraulics Engineering with emphasis in the context soil-structure interaction, fluid-structure interaction, fluid-soil-structure interaction, pavement engineering, etc.)

2. The objective behind seminar is to equip the student for carrying out literature survey, summarize the findings of the literature and formulate the problem or arrive upon the statement of the problem. Along similar lines, the student can work for their dissertation in the subsequent stages.

3. The student in consultation with the Guide/Supervisor shall settle or finalize/identify the topic of the seminar in the context of the specialization or allied theme. The students shall carry out literature survey pertaining to the topic, various sub-topics/approaches/methods falling within the purview of the topic. The student shall use multiple literatures and understand the topic, analyze the literature and summarize the findings. The report shall be compiled in a standard format.

4. The assessment of the seminar shall be assessed in respect of the following points:
   - Quality of Literature survey and Novelty in the topic
   - Relevance to the specialization
   - Understanding of the topic
   - Quality of Written and Oral Presentation

IMPORTANT NOTE:

1. Assessment of Seminar will be carried out by a pair of examiner.
2. Literature survey in case of seminar is based on the broader area of interest in recent developments and for dissertation it should be focused mainly on identified problem.
3. At least 4-5 hours of course on Research Methodology should be conducted which includes Literature Survey, Problems Identification, Analysis and Interpretation of Results.

Lab
Class Work: 20 Marks
Exam: 30 Marks
Total: 50 Marks
Duration of Exam: 3Hrs
Study and practical application of different civil engineering software, like STAAD.Pro, ANSYS with Civil FEM, E-Tab, SAP, ABACUS

Books:
1. STAAD.pro manual.
2. ANSYS Manual.
3. E-Tab Manual
5. ABACUS Manual.

Guidelines for Project work
- Student should carry out the preliminary literature survey and subsequently, identify the problem in broad terms for Project and finalize/settle it in consultation with Guide/Supervisor.
- Pursuant to this, the student shall refer multiple literatures pertaining to the theme of the problem and understand the problem and define the problem in the precise terms.
- Student should attempt solution to the problem by analytical/simulation/experimental methods. The solution shall be validated with proper justification. The students shall compile the report in standard format.
- Student should publish at least one paper based on the work in reputed International / National Conference in which papers are blindly reviewed.
- The topic of the Project should be such that it is a value addition for the existing knowledge in the field and has some worthwhile research input.
Guidelines for Dissertation

- Student should carry out the preliminary literature survey and subsequently, identify the problem in broad terms for Dissertation and finalize/settle it in consultation with Guide/Supervisor.
- Pursuant to this, the student shall refer multiple literatures pertaining to the theme of the problem and understand the problem and define the problem in the precise terms.
- Student should attempt solution to the problem by analytical/simulation/experimental methods. The solution shall be validated with proper justification. The students shall compile the report in standard format.
- Student should publish at least one paper based on the work in reputed International/National Conference in which papers are blindly reviewed (desirably in Refereed Journal). More weightage shall be given for the journal publication.
- The work to be pursued as a part of the dissertation shall be divided broadly in two parts, namely- Dissertation Stage I and Dissertation Stage II.
- The topic of the Dissertation should be such that it is a value addition for the existing knowledge in the field and has some worthwhile research input.

Guidelines for Assessment of Dissertation I

- Dissertation I should be assessed based on following points
  - Quality of Literature survey and Novelty in the problem
  - Clarity of Problem definition and Feasibility of problem solution
  - Relevance to the specialization.
This will be based on the syllabi of theory subjects, it shall consist of the internal viva based on the syllabus of the all subjects.

**Guidelines for Dissertation**

- Student should carry out the preliminary literature survey and subsequently, identify the problem in broad terms for Dissertation and finalize/settle it in consultation with Guide/Supervisor.
- Pursuant to this, the student shall refer multiple literatures pertaining to the theme of the problem and understand the problem and define the problem in the precise terms.
- Student should attempt solution to the problem by analytical/simulation/experimental methods. The solution shall be validated with proper justification. The students shall compile the report in standard format.
- Student should publish at least one paper based on the work in reputed International / National Conference in which papers are blindly reviewed (desirably in Refereed Journal). More weightage shall be given for the journal publication.
- The topic of the Dissertation should be such that it is a value addition for the existing knowledge in the field and has some worthwhile research input.

**Guidelines for Assessment of Dissertation II**

After completion of about 30% of the work (which shall be decided by the Guide/Supervisor), proposed to be a part of the Dissertation, the student shall deliver a seminar based on the work pursued by him/her during the second stage. It will be assessed by the panel of internal examiners appointed by the Head of the Department/Institute of the respective programme, as the case may be.
Dissertation II should be assessed based on following points

- Clarity of objective and scope
- Methodology for carrying out the work defined as a Problem Statement (Formulation in respect of the analytical studies/ Experimental Work / Combination thereof depending upon the nature of the work involved)/ Data Collection, etc.

Dissertation II should be assessed through a presentation by a panel of internal examiners appointed by the Head of the Department/Institute of respective Programme.

- The topic of the Dissertation should be such that it is a value addition for the existing knowledge in the field and has some worthwhile research input.
Guidelines for Assessment of Dissertation III

After completion of about 70% of the work (which shall be decided by the Guide/Supervisor), proposed to be a part of the Dissertation, the student shall deliver a seminar based on the work pursued by him/her during the second stage. It will be assessed by the panel of internal examiners appointed by the Head of the Department/Institute of the respective programme, as the case may be.

The student shall take into account the suggestions made by the examiners/s during pre-submission seminar in view of the work pursued by the students and shall try to incorporate it in the work, if the suggestions are worthwhile, consistent with the situation and provided they are such that those can be accommodated/included in the work being pursued by the candidate at that point of time. After the pre-submission seminar, the student shall compile the report in a standard format and written in the systematic manner and chapter wise.

The student shall adhere to the following scheme of chapterization while compiling the final report in general. The Guide/Supervisor shall ensure the student has written the Dissertation Report in appropriate language (grammatically correct).

1. Introduction: The student shall give the introduction to the theme of the subject chosen as a Dissertation, give further current state of art related to the theme (i.e., brief review of literature), broad problem definition and scope of the work. The student shall also state at the end of this chapter the scheme of chapterization included in his/her Dissertation.

2. Theoretical Aspects/Review of Literature: The student is expected to highlight the various theoretical aspects pertaining to the topic chosen, literature (updated) available related to the various aspects of the topic chosen citing the research work carried out by the earlier researchers and summarize the findings of the literature. The student may state the precise the problem definition.

3. Formulation/Methodology/Experimental Work: In this chapter, the student is expected to explain the methodology for pursuing his/her work. In case of analytical work, student may give the Formulation along with validation for assessment of accuracy of the numerical procedure being used/proposed by him/her. In respect of experimental work, the student may outline the experimental set up/procedure. In case of the work in which either approach is involved, the student may appropriately provide the methodology to cover either approach. This chapter may
be supported by the Data Collection if the work involves the Collection of the Data and its subsequent processing.

4. Analysis/ Results and Discussion: The student is expected to present the results emerging from the analytical/ theoretical/ experimental study/ studies being pursued by the students. The results shall be discussed properly. The results may be compared with the results published by the earlier researchers if the work being pursued by the student warrants the same. The student may indicate the broad conclusions/ inferences at the end.

5. Summary and Conclusions: Based on the results discussed in the previous chapter, the student shall give in the systematic manner the conclusions/ inferences emerged from the study and summarize it properly. The student shall indicate the scope of the future work which can be extended by any other student/ researcher in the future. The student may point out the limitation/s left out in the work pursued by him/ her while carrying out the work contained in the Dissertation.

6. References: The student shall at the end give the list of the references in the appropriate manner. This part should not be treated as a Chapter. For referencing style, student may refer any standard journal of national and international repute.

7. Publication/s: The student shall give the list of the technical/ research papers published / accepted publication in the referred journal/ conference proceedings. This part should not be treated as a Chapter.

Dissertation II should be assessed based on following points:

- Quality of Literature survey and Novelty in the problem
- Clarity of Problem definition and Feasibility of problem solution
- Relevance to the specialization or current Research / Industrial trends
- Clarity of objective and scope
- Methodology for carrying out the work defined as a Problem Statement (Formulation in respect of the analytical studies/ Experimental Work / Combination thereof depending upon the nature of the work involved)
- Quality of work attempted
- Presentation of the results along with the validation of results or part thereof.
- Quality of Written Report and Oral Presentation
Publication of the technical/ research paper by the student in a conference of National / International repute. Publication of paper in a referred/ peer reviewed journal is highly preferred.

Dissertation II shall be assessed through a presentation jointly by the Internal Examiner (Guide/ Supervisor) and External Examiner appointed by the MVN University.
